# PASSIVE INCOME - MERGEX MASTERNODES

Master nodes are privately-maintained servers that provide infrastructure and operational support to a blockchain platform, amongst other functionalities. Master nodes are generally full nodes with added functionality such as instant transactions, improved privacy and security, and a decentralized governance system

Owning a full or partial MERGEX master node gives investors an opportunity to earn true passive income. 30% of every mined block is available to master node holders and is awarded if your node interacts with the block

Hosting sites such as [MiningPowerEU](#) and [Penicula](#) give investors the opportunity to re-invest their coin rewards which has the effect of making more nodes for you, or simply to have the rewards sent to your wallet of choice

MERGEX master nodes will be available from launch and everyone will have a level playing field when it comes to getting on the master node ladder early. None of the pre-mined coins will be allocated into the master node ecosystem

The more master nodes that are in the MERGEX system the better the whole ecosystem will perform. Coins will become scarce on exchanges and will drive prices up due to simple supply and demand mechanics.
